Electrical Single-Arm Surgical Pendant

KDD-9

KDD-9

1. horizontal rotation angle: 0-340 °
2. maximum weight bearing on the terminal box: 80 kg
3. standard air supply: 2 oxygen, 2 suction, 1 air
4. standard power supply: 8*3-hole power sockets
5. Equipment trays: 2
6. Infusion pole: one set
7. Lifting stroke: 400 mm

(The platform, drawer, gas interface\power socket, network interface\telephone interface can be flexibly selected according to customer requirements.)

Single-arm lifting pendant is a new practical auxiliary equipment for medical rescue commonly used in modern operating rooms. Its structure is compact and reasonable in design, that is, it can lift 400 mm and rotate 340 degrees within a certain range. When it is lowered, the medical staff can lift the hand and be handy. After raising, it does not affect any work. It can easily move and lock the position of tower body according to the requirements of medical staff. Necessary medical gas, suction, vacuum suction, strong and weak electricity, network output terminal are concentrated on the platform function box, the platform can carry a certain weight of medical instruments, and is an ideal medical device, power supply, instrument platform workstation tower for medical staff.
